

# Donald's Creek Fish Bunting Template

0cm 2.6cm

6.3cm

16.7cm

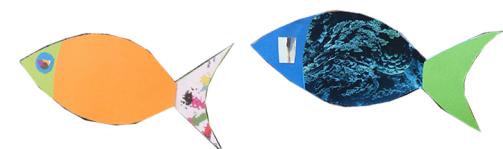

22.3cm

Measurements: whole fish is approximately 22.3cm long x 8.7cm wide (across widest point)  
Follow "How to make double-sided fish bunting", steps 1-5 to make one or more doublesided fish and fish bunting.

Please note: the fish template is not completely symmetric, therefore if you decide to cut multiple pieces before you glue them all on, remember to test your cut out pieces of paper to make sure they fit, before you apply glue (especially after you turn the fish over)  
You can always trim little bits off with scissors after they are all glued on.

## How to make double-sided fish bunting

You will need:

Materials: coloured or scrap paper (old magazines, real estate /news/papers), string.

Tools: Scissors, glue stick and hole punch (optional)

1) Print/photocopy and cut out 2 x fish templates

Cut one template into parts: tail, head, and main body. You can use all these templates again and again.

2) Trace and cut coloured or scrap paper to fit one whole fish.

This gives you a stable surface onto which you can glue other coloured paper onto each side.

3) Trace and cut coloured paper to fit one side and glue onto the fish.

Turn the fish over, and trace and cut coloured paper to fit the other side of fish.

Glue tail, body and head onto both sides of whole fish cut-out.

4) Cut round pieces for eyes and glue on (tips: make each eye from two different types of paper, or look for a pattern that creates an interesting eye shape).

Trim any edges that don't fit neatly (this is optional - sometimes it's nice to leave them on!).

5) To make your next fish, complete steps 2-4 again.

To hang: cut a small hole in head or tail of each fish for the string (a hole punch does an excellent job). Add more coloured fish in different colours and patterns and use as bunting.
